

# CONSTRUCTION MANAGEMENT

---

Construction management professionals oversee and manage construction projects ranging from residential, commercial and industrial buildings. The Construction Management Technology Program at Laredo College provides instruction related to construction management/supervisory roles, building science, scheduling, budgeting, personnel management, quality assurance, and safety. The Construction Management Technology program is designed to develop qualified personnel through innovative technologies, hands on construction practices, and business management training for employment in the field of construction or to enhance the workplace skills of those already employed in the industry for career advancement. The program also offers multiple exit points and various program credentials to better prepare graduates for employment in the field of Construction Management and related fields.
