

DIESEL ENGINE MECHANICS AND REPAIR TECHNOLOGY

The Diesel Technology Program at Laredo College is designed to prepare students for a rewarding career in the heavy-duty truck repair industry. With a strong emphasis on hands-on training and industry-relevant skills, this program equips graduates to tackle the challenges of maintaining and repairing diesel engines and large vehicles. Learn the most up-to-date advancements in diesel technology, including electronic diagnostics, fuel systems, and emissions control. The program prepares students for various industry certifications, ensuring students are marketable in this vital and growing industry.

Student must possess the reading, writing, and math skills necessary to enter the curriculum. Student should consult with the Program Advisor for Entry Level Requirements.
